

# About LineupBoard

LineupBoard is a web-based system that allows you to manage your Shift Planning Equipment process and workforce allocations on a per-shift basis, from any computer without limitations.

LineupBoard is available on any device with a web-browser, from large displays in meeting rooms to personal laptops. Moving you from whiteboards to the intranet with more reliable, real time information site wide.

Quickly and effectively allocate equipment and workers with a drag and drop interface. Lineup Board is optimized to give you immediate visual feedback when planning shifts, to minimize planning oversights and maximise compliance.

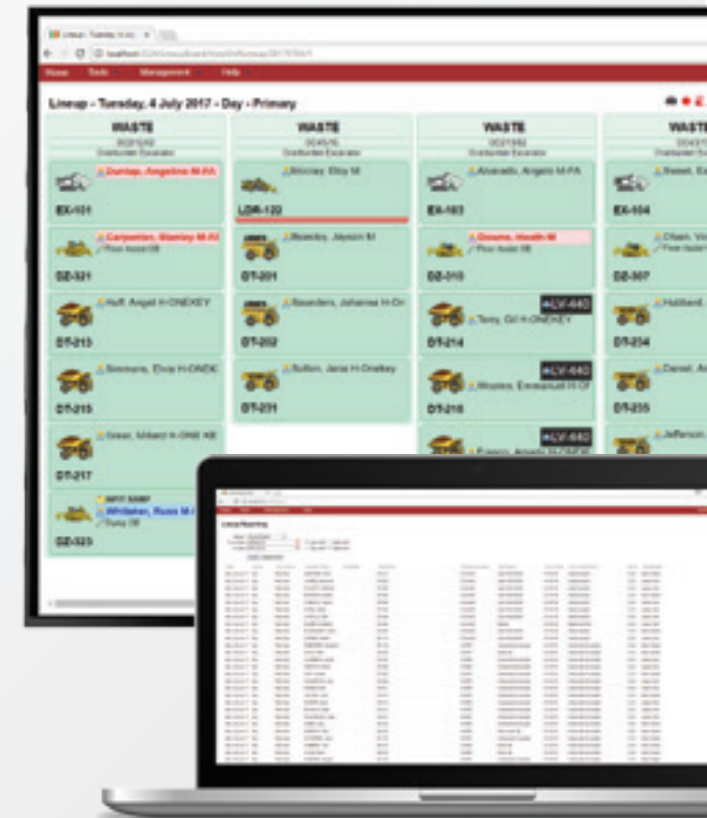

LineupBoard has proven effectiveness in production daily since early 2013.

Based in Newcastle, NSW, Australia, devFU Pty. Ltd. is a software development & technology company specializing in delivering services to the mining industry.

 LineupBoard

## LineupBoard

provides visual feedback to highlight any anomalies within your shift lineup.

-  missing and expired worker competencies
-  equipment breakdowns and delays
-  equipment without assigned tasks or labour
-  non-rostered workers and attendance tracking
-  first aid and other skills
-  show equipment configuration for tyres, trays & fleets
-  leave notes and comments on lineup items

Manage and track worker information including:

- Leave
- Unplanned absences
- Crew changes and Manning Schedules
- Overtime Nominations & Allocations
- Competency Information

By managing this information within LineupBoard, your shift planners will be using the most up to date information to plan for success.

Competency Management and Attendance Tracking can be integrated with an external provider or with stand alone system, **Traken**.

Traken Login terminals provide a simple card-based login system that fully integrates with LineupBoard. Supervisors can quickly identify workers that are onsite and ready to work.
